Milton Eisen, Chief

ACKNOWLEDGMENTS—This report was prepared under the direction of **Milton Eisen**, Chief of the Industry Division. **John R. Wikoff**, Assistant Division Chief for Current Programs, provided overall guidance for this report.

Within the Industry Division, the preparation of this report was performed under the supervision of **Ruth Runyan**, Chief, Shipments, Inventories, and Orders Branch, assisted by **Kathleen Swindell**. Other contributing industry analysts include **Stephen Andrews, Hubert Calderon, Craig Chason, Ronald Danna, Willis Freeman, Henry Haurand, Jesse Havard, Laurie McKenna, Mattie Norwood, David Peterson, Richard O'Sullivan, Ruth Renwick, Clive Richmond,** and **Charles Wisniewski.** The assistance of **Gladys Archer, David Cooper, Grace Daly, Deborah Dove, Norman Dyson, Rose Fleming, Rosella Geary, Ann Johnson, Catherine Knudsen, Lorrine Mitchell, Karen Taylor,** and **Elizabeth Witcher** is also appreciated, as is that of **Lillie Mae Skinner** who coordinated the various phases of the publication process.

The electronic computer programs were developed under the direction of **William Norfolk,** Assistant Chief for Operations. **Albert Ginsberg** and **Jack Wasil** developed the computer editing and tabulation programs under the direction of **Jerry Bell.**

Finally, a special acknowledgment is due to the many businesses whose cooperation was essential to the success of this report.

Address inquiries concerning this report to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call Ruth Runyan or Kathleen Swindell, (301) 763-2502.

SUGGESTED CITATION

U.S. Bureau of the Census,
Manufacturers' Shipments, Inventories, and Orders: 1967-1978 M3-1.8
U.S. Government Printing Office, Washington, D.C. 1978.

For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce district office. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. Price $2.00 per copy.

I. INTRODUCTION

The monthly seasonally adjusted data in the Current Industrial Reports Series, M3, **Manufacturers' Shipments, Inventories, and Orders, 1958 to 1978**, have been revised to reflect the updating of the seasonal adjustment factors resulting from the addition of the 1978 survey data. Some of the unadjusted historical series were revised to include corrections for minor reporting and/or processing errors. Corrected series are shown in the table below.

INDUSTRY SERIES WITH HISTORICAL CORRECTIONS TO THE SEASONALLY UNADJUSTED DATA

Industry	Shipments	New orders	Unfilled orders	Inventory total	Stage of fabrication
Nonferrous metal products				X	X
Fabricated metal products	X	X	X		
Electrical machinery	X	X	X		
Electronic components	X	X	X		
Transportation equipment	X	X	X		
Aircraft, missiles, and parts	X	X	X		
All other durable goods	X	X	X	X	X
Chemicals and allied products	X	X		X	X
Petroleum and coal products	X	X			
Defense capital goods		X	X		
Nondefense capital goods	X	X	X		

The next monthly report issued in the M3 series will be consistent with the revised data shown in this publication. The methodology followed in updating the seasonal adjustment factors is the same as that used for the 1977 annual benchmark publication.

The data included in this report are limited to the years 1967 to 1978. Although data for 1958 to 1966[1] were included in the calculations of the seasonal factors, no significant revisions to the seasonally adjusted monthly estimates for those years resulted. Data for all published industry categories, 1958 to 1978, are available for purchase on computer tape through the Data User Services Division, Bureau of the Census.

II. SUMMARY OF REVISIONS

Revisions to the previously published seasonally adjusted M3 data, resulting from the addition of 1978 survey data to the calculation of seasonal adjustment factors, are generally small. With the exception of corrections to the aircraft and parts industry, revisions to the seasonally unadjusted data are also small. Both the defense and nondefense components of the aircraft and parts industry were affected by reporting errors in shipments, new orders, and unfilled orders. In addition to corrections for reporting errors, the commercial, or nondefense, component of unfillled orders for complete aircraft was systematically revised to reflect a change in the implicit weighting of manufacturers of small aircraft versus manufacturers of large aircraft. The total effect of these revisions for the industry for 1978 is an average monthly reduction in new orders of 10.9 percent, in shipments of 9.5 percent, and in unfilled orders of 3.7 percent.

The total effect of revisions to the seasonally adjusted data for all manufacturing industries for 1978 was an average of 0.77 percent per month for new orders, 0.54 percent per month for shipments, 0.83 percent per month for unfilled orders, and 0.15 percent per month for inventories. Data revisions for all major industry groups for 1976 to 1978 are summarized in the table on page IX.

III. SEASONAL ADJUSTMENT METHODOLOGY

The monthly data on shipments, inventories, and unfilled orders are adjusted for seasonality at the most detailed level tabulated in the survey using the X-11 variant of the Census Bureau's seasonal adjustment program.[2] Seasonally adjusted industry aggregates are derived by adding seasonally adjusted components rather than by direct seasonal adjustment of the aggregates. New orders data are similarly derived from the

[1] See Current Industrial Reports M3-1.7, **Manufacturers' Shipments, Inventories, and Orders: 1958-1977.**

[2] Documentation of this program can be found in **Electronic Computers and Business Indicators**, National Bureau of Economic Research Occasional Paper 57 (New York, 1957); **Tests and Revisions of Bureau of the Census Methods of Seasonal Adjustments**, Bureau of the Census Technical Paper No. 5 (Washington, 1961); **The X-11 Variant of the Census Method II Seasonal Adjustment Program**, Bureau of the Census Technical Paper No. 15 (Washington, 1967).

[1]Revisiona to tho tranaportation oquipmont industry are due almost entirely to revisiona in tho seasonally unadjusted levels of shipments and unfilled orders for tho aircraft and parta industry. Thoso revisions wore a result of roporting errors by aircraft companies.

seasonally adjusted shipments and unfilled orders data in the same manner as the unadjusted estimates. (See section IV B below.)

A. The X-11 Variant Approach

The X-11 variant of the seasonal adjustment program provides (1) improved techniques over the earlier versions of the program for the treatment of extreme observations and (2) a regression program to identify adjustments for the variations in the number of trading days per month. Use of the trading day routine, however, is optional and is not used in the M3 survey. Instead, shipments data in the individual reports are adjusted prior to tabulation for the number of trading days as well as for variations in the length of the reporting period.

Appendixes C through E provide the historical and current trading-day adjustment factors, the forecasted monthly seasonal factors[3] for use in 1979, and summary measures used in evaluating the seasonal patterns for the industry categories.

B. Trading-Day Adjustment Factors

Variation in the rate of activity that arises from the existence of different numbers of trading days in the same month for different years can be an important cause of month-to-month irregular fluctuations. Unlike some other causes of irregular fluctuations (such as unexpected economic developments, unusual weather, and statistical errors), trading-day irregularities can be approximately identified and removed so that the underlying trend-cycle stands out more clearly. Hence, it is often possible to reduce the irregular factor by a trading-day adjustment.

As noted earlier, the M3 survey does not use the trading-day adjustment option in the X-11 program, but rather adjusts the shipments data for monthly trading-day variations in the individual reports prior to tabulation. At the same time, the reports are adjusted for variations in the length of the report periods of companies. In effect, all reports are adjusted to reflect manufacturing shipments for one-twelfth of a year, or a standard month of approximately 26 trading days.

Considerations used in selecting trading-day adjustment factors are knowledge concerning industry practices, tests of alternative sets of factors, and derivations of trading-day factors based upon the information contained within the data. For most series, the development of monthly trading-day adjustment factors is based upon the assumption of equal weights for Monday through Friday, half-weight for Saturday, and half-weight for Sunday. The logic for this trading-day pattern rests on the assumption that (1) the books in which sales records are kept are generally open Monday through Friday and that (2) about half of the sales volume each month takes place with monthly periodicity independent of the vagaries of the month-end calendar. In allowing for this half of the sales volume, equal treatment is given to Saturday and Sunday. For further discussion of the trading-day factor selections, see the notes to appendix C.

C. Special Adjustments for Specific Series

The routine X-11 procedure for the treatment of extreme values was used to adjust shipments data for strikes and other irregularities, except in the steel and the automotive industries.

1. Steel Industries. In the steel industry, a strike, or the anticipation of a strike, has occurred every 3 years. This has altered the seasonal pattern for shipments, inventories, and orders data in these periods by creating a general pattern of heavy ordering before the strike or settlement and a weak ordering rate afterwards. To eliminate the effects of these irregular movements from the calculations of the seasonal adjustment factors, data for the years in which a strike either occurred or had been anticipated[4] were excluded from the original data series. A pseudo series was then constructed using a beginning link point of December 1958 and the monthly ratios of change of the following years' data. After seasonally adjusting this pseudo series, the excluded years were reintroduced, with the seasonal factors for these years estimated to be the average of the preceding and following years' factors.

2. Automobile Industries. The seasonal adjustment of shipments data for automotive assembly operations presents a special problem. Each year the automotive assembly plants suspend operations to retool assembly lines for the next model year. This results in enormous fluctuations in the July, August, and September data, which do not always occur in the same month or with the same magnitude. Seasonal adjustment, therefore, cannot be done during these months in the usual manner, and a special procedure is used. As the model changeover period usually takes place entirely within this 3-month period, the problem of the timing of the changeover was removed by modifying the input data to the seasonal adjustment program as follows. Shipments estimates for July, August, and September were developed based on production estimates published in advance by the industry. These estimates were then averaged, and the altered automotive series, i.e., with July, August, and September equal to each other, were seasonally adjusted. The seasonally adjusted estimates for July, August, and September were then averaged and included, at these August and September no change levels, in the published seasonally adjusted aggregates. An exception to this procedure was carried to the third quarter 1976 data, where a special adjustment for the August through September strike was made. (For the published seasonally unadjusted automotive data series, the original, or reported data, are included in the aggregates.)

3. Defense-Oriented Industries. Beginning in 1976, the fiscal year for the Federal Government was changed from a July 1 through June 30 basis to an October 1 through September 30

[3] The seasonal factors as generated by the X-11 program are calculated as the algebraic sum of the previous year's (1978) factor for a particular month and one-half the difference between the previous year's (1978) factor and the 2-year-ago (1977) factor for that month.

[4] The years 1959, 1962, 1965, 1968, and 1971 were excluded from the seasonal factor calculations. Data for 1974 and 1977 were retained, since early settlement of the strike in those years resulted in only minor irregular fluctuations in the data.

basis. The change probably affected the timing of purchases and the awarding of contracts. Although the impact of this change is not known, the use of previously established seasonal patterns would have substantially distorted the current data on new and unfilled orders, since these seasonal factors reflect historical Government purchasing patterns. To compensate for this shift in seasonality, a set of composite seasonal factors for unfilled orders was developed for the defense components of the communications equipment, aircraft, aircraft parts, shipbuilding and ordnance industries for the period May 1976 through September 1977. The composites are based on an averaging of each month's seasonal factor (as normally calculated in the X-11 program) with the factor for the third month following, i.e., one quarter later. For example, if the adjustment factor for defense aircraft for November 1975 was 102.7 and for February 1976, 99.8, the factor used for seasonally adjusting February 1977 data would be 101.2.

The resulting set of composite factors for the period October 1976 through September 1977 is being used for succeeding fiscal years, pending the availability of sufficient data to assess the impact of the change in the fiscal year on the seasonal pattern of the defense industries. Also, the use of these composite seasonal factors modifies the derived new orders data for the defense series. (See section IV B below.) Similar adjustments could not be made for nondefense Government orders since such data are not compiled separately.

IV. DESCRIPTION OF SURVEY

The Manufacturers' Shipments, Inventories, and Orders survey provides broad-based monthly statistical data on economic conditions in the domestic manufacturing sector. It is designed to measure current industrial activity and to provide an indication of future trends. The data are used extensively by the executive branch of the Government in developing economic, fiscal, and monetary policy; by the Bureau of Economic Analysis (BEA) as components of the gross national product estimates; and by trade associations, corporate economists and other members of the business community as an analytical tool in their assessment of the current and future economic condition of the country.

The M3 shipments and inventory data are comparable to the total published in the annual survey of manufactures (ASM). The ASM is a sample survey of approximately 70,000 manufacturing establishments drawn from a 5-year census of manufactures universe of about 312,000 establishments. In the ASM, each manufacturing location reports data on value of shipments, beginning and end-of-year inventories as well as various other economic variables.

A. Composition of the Survey Panel

The monthly M3 estimates through 1978 are based on information obtained from approximately 5,000 reporting units and include virtually all manufacturing companies with 1,000 or more employees, as well as selected smaller companies which are included to strengthen the sample coverage in individual industry categories. For firms which operate in a single M3 industry category, the reporting unit typically comprises all operations of the company. At the request of the Census Bureau, most large, diversified companies file separate reports for divisions which operate in different industrial areas.

Each company or division of a company in the sample is classified into one of 79 industry categories for which separate estimates are made (see appendix A) based on the major activity of the reporting unit. Some reporting units include industry activities outside the M3 category in which they are classified. The survey methodology assumes that the month-to-month changes of the reporting units classified in each industry category effectively represent the month-to-month movements of the establishments in the SIC industries which comprise the category.

The sample selected in 1962 for this survey included all companies with more than 1,000 employees. Smaller companies were sampled proportional to their employment size. Because of poor response rates, reporting by companies with less than 100 employees was discontinued in 1963 and, instead, data for these companies were estimated by using overall industry averages. In the following years, work continued on obtaining divisional reports from large, diversified firms and on obtaining voluntary participation of all firms with 1,000 or more employees. This effort was intensified in the early 1970's as additional funding was made available. Virtually all such companies now report.

There was also some deterioration in response rates for companies with between 100 and 999 employees. Therefore, in January 1975 a supplemental sample of approximately 1,000 companies was selected from the universe of companies in this size range in order to strengthen the estimates. Approximately 60 percent of the companies from this supplemental sample are now reporting, and their reports are included in the monthly estimates beginning with January 1978.

B. Monthly Estimation Procedure

The monthly estimates of shipments, unfilled orders, and total inventories are derived for each industry category by multiplying the industry estimate for the previous month by the percentage change from the previous month for companies reporting in the current month.[5] The previous month's data for an individual firm may either be reported by the firm or "imputed" by the Census Bureau. This is a change from the procedure used prior to 1975, when reported data for both the current and previous month were required for a company's report to be used in computing the current month's estimate.

From time to time, an individual company report may show unusually large changes from the previous month which differ substantially from the movement shown by the rest of the reporting panel. An example of this is the effect of a strike upon an individual company. Such extreme movements are isolated from the estimation procedure as follows: the data for the individual company are removed from the computation of the aggregate month-to-month percentage change and from the prior month's industry estimate; the modified percentage

[5] This procedure is explained in greater detail in Series M3-1, Manufacturers' Shipments, Inventories, and Orders, 1947-1963 (Revised).

change is then applied to the reduced prior month's estimate, giving a current month's estimate of the entire industry excluding the company with the unusual month-to-month change; finally, the company's reported data are added to the modified current month's estimate to obtain the estimate for the entire industry. The effect of this procedure is to restrict the basis of estimation for nonrespondents and firms not in the survey panel to the general trend of the industry.

The seasonally adjusted estimates for each M3 industry category are calculated by dividing the unadjusted estimates by a seasonal adjustment factor previously computed by the X-11 seasonal adjustment program (see section III above.)

Though collected as a separate item, new orders are not calculated according to the standard ratio-estimate procedure. The reason for this is that not all companies report new orders; and some that do report this item limit their reporting to specific products for which long lead times are required in the production cycle. These companies, in effect, exclude new orders received for products that are shipped from inventory. To take advantage of the higher response rate for shipments data and to include orders filled from inventory, new orders are computed by adjusting the current month's shipments by the change in the backlog of unfilled orders. Thus, the estimate of new orders includes orders that are received and filled in the same month as well as orders that have not yet been filled. Also included are the effects of cancellations and modifications of previously reported orders.

Seasonally adjusted new orders are computed by adding (or subtracting) the difference in the seasonally adjusted unfilled orders for the current month from the previous month to the current month's seasonally adjusted shipments. This procedure preserves the definitional identity between shipments, unfilled orders, and new orders, although it will yield seasonally adjusted new orders estimates which differ slightly from an independent seasonal adjustment of new orders.

The estimation of total inventories follows the procedure previously described. However, because a significant number of companies that report total inventories cannot report inventories by stage of fabrication, a modified procedure is used to estimate the stage-of-fabrication data. In this procedure, the inventory totals previously estimated are cumulated to two-digit SIC major group levels and serve as control totals for the stage-of-fabrication data. Initial estimates by stage of fabrication are made for each two-digit SIC based on the link-relative method for reporting companies; the differences between the sum of the stage-of-fabrication detail and total inventories are then allocated proportionally to the stage-of-fabrication figures to form the estimates. Each stage-of-fabrication estimate is adjusted by the appropriate seasonal factor to obtain seasonally adjusted figures; and, once more, the difference between the sum of the seasonally adjusted figure for inventories by stage of fabrication and the seasonally adjusted total inventories is proportionally allocated to the stage-of-fabrication detail.

C. Corrections of Estimates to ASM Levels (Benchmarking)

Periodically, the estimates of annual shipments and end-of-year inventories derived from the monthly survey are benchmarked to the annual totals compiled in the census and annual survey of manufactures (ASM). This benchmarking adjusts for any differences that may result from collecting monthly data on a divisional or company basis as compared to the establishment basis used in both the ASM and the census of manufactures. It also corrects for errors of estimation in the monthly survey and for any reporting or processing errors that may not have been detected as part of the review of the monthly estimates. The last benchmark revision was issued in March 1978, at which time the monthly estimates were benchmarked to the annual data through 1976.

The benchmarking process involves comparing the monthly reports with the annual reports (Form MA-100) for individual companies and reconciling large differences. Some differences are to be expected, as the monthly reports are for companies or divisions of companies, while the annual reports are for individual establishments. Corrections are made to the monthly estimates for both response and processing errors. The corrected monthly estimates are then adjusted to the annual benchmark levels for shipments and to the December year-end figures for inventories. In both processes, the objective is to preserve the original month-to-month movements to the extent possible. Inventories by stage of fabrication are benchmarked in the same way and then balanced to the total inventories. For both sales and inventories, the data are extrapolated forward for the months following the most recent benchmark year by using the original month-to-month movements. However, corrections are made for individual errors in the monthly movements prior to this extrapolation.

Estimates of unfilled orders have not been benchmarked to the ASM, since data on unfilled orders were not collected in that survey prior to 1976. A complete discussion of the methodology followed in developing the unfilled order levels appears in the benchmark report, M3-1.6, issued in December 1976. In order to develop more reliable backlog levels, a survey was conducted in 1977, requesting the level of unfilled orders as of December 1976. For single establishment companies, the inquiry was included on the regular ASM report forms for 1976. For multiestablishment companies, a separate survey report form designed to accommodate an entire company's manufacturing activity was used. The results of this survey are still being evaluated. Upon completion, new industry backlog levels will be established and the monthly M3 data benchmarked accordingly.

D. Qualifications of the Data

The monthly data presented in this publication are subject to both sampling and nonsampling errors. Sampling errors occur because reports are received from a sample rather than from the complete universe of manufacturing companies. Because of the present composition of the sample, the amount of sampling error cannot be quantified. Nonsampling errors, on the other hand, are attributable to many sources. The use of company or divisional reports to estimate the monthly change for establishments is probably one source of nonsampling error. In addition, response and processing errors may be present, although it is believed that most of the important errors of this

kind have been detected and corrected in the reasonableness and consistency edit of the data prior to publication.

V. DEFINITION OF TERMS

A. Value of Shipments

Value of shipments as reported in the ASM represents net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Where the products of an industry are customarily delivered by the manufacturing establishment (such as in certain food industries—fluid milk, bakery products, soft drinks), the value is based on delivered price rather than the f.o.b. plant price. In the annual survey, multiestablishment companies report value information for each plant as if it were a separate economic unit. Thus, products transferred from one plant to another are reported at their full economic value, i.e., in addition to the cost of production, a reasonable proportion of company overhead and profits are included.

Included in the value of shipments, in addition to products made in the establishments, are those made elsewhere under contract from materials of the establishment. Also included are the value of all products sold, transferred to other plants of the same company, or shipped on consignment. Receipts for contract work performed for others, resales, miscellaneous activities such as the sale of scrap and refuse, installation and repair work performed by employees of the plant, and the value of research and development performed at the plant are also included.

In the shipbuilding industry, the value of work done in a given year varies considerably from the value of shipments because of the long lead time between the start and completion of a large vessel. In the annual survey, therefore, the value of work done during the year, rather than the value of shipments, is included. The same procedure is followed for aircraft produced on a cost-plus contract. Aircraft produced on a fixed-price contract are reported in the usual manner when the products are shipped. Where value of work done is reported in place of shipments, the inventories are normally charged to the customer as costs are incurred and are not reported by the shipyard or the aircraft producer as finished goods inventories.

The value of shipments figures developed from the Annual Survey of Manufactures contain duplication at the all manufacturing and industry group levels, since the products of some industries are used as materials by other industries within the same industry group. With the exception of motor vehicles, it is not significant at the four-digit SIC industry level. Since the M3 industry categories typically are groupings of industries, this duplication is significant for all manufacturing, durable goods and nondurable goods categories, and the various market groups. The significance of the duplication within the specific M3 industry categories varies depending on their four-digit industry composition. It is most pronounced in a few highly integrated industry areas, such as primary metals and motor vehicles and parts.

For multiunit companies, the M3 reports received each month typically are not establishment reports but are company or "divisional" level reports that encompass groups of establishments. The actual sales reported are usually net sales and receipts from customers and exclude the duplication of interplant transfers. These reported sales are used to calculate the month-to-month changes which bring forward the establishment-based shipments for the industry category.

B. Inventories

End-of-month inventories are identical in definition to the end-of-year inventories in the annual survey of manufactures. In the annual survey of manufactures, respondents are asked to report inventories of individual establishments at book value by whatever method derived. Since different methods of inventory valuation are used (LIFO, FIFO, etc.), it should be emphasized that the definition of the aggregate inventories for establishments in an industry is not precise.

Inventories are reported by stage of fabrication: (a) finished goods; (b) work in process; and (c) materials, supplies, fuel, and other inventories. In using inventories by stage of fabrication at the all manufacturing and two-digit SIC major group levels, as well as for the durable and nondurable goods sectors, it should be noted that a finished product of one industry may be a raw material for another industry at the next stage of fabrication. Insofar as the durable and nondurable goods sectors and also the two-digit major groups contain industries with successive stages of processing, the same type of inventories may be included under different stage-of-fabrication categories in the aggregate statistics.

In some industries, there are special problems in measuring inventories by stage of fabrication. These are industries in which products are stored under controlled conditions and where products are aged, such as in the tobacco, whiskey, and cheese industries. It is not clear whether such products should be treated as finished goods or as work in process. In all these industries, substantial finished goods inventories have been reported in the annual survey of manufactures. These data have been summarized in the inventory tables in a consistent manner for all the annual survey of manufactures years used as benchmarks for the M3. The inventories reported in the M3 for each type of inventory are used to bring these end-of-year inventories forward each month. Even if there are inconsistencies in the company or divisional level inventories by stage of fabrication compared to the annual survey of manufactures establishment reports, the month-to-month data which are used to determine the ratio of change are consistent within themselves.

C. New Orders Received and Unfilled Orders

Orders as reported in the monthly survey are net of cancellations during the month of orders previously reported. They include orders received and filled during the period as well as orders received for future delivery. They also include the net sales value of contract changes which increase or decrease the sales value of the unfilled orders to which they relate. Orders are defined to include only those supported by binding legal documents such as signed contracts, letters of award, or letters of intent, although in some industries this definition may not be strictly applicable. In case of letters of intent, the full amount of the sales value is included if the parties are in substantial agreement on the amount; otherwise, only the funds specifically authorized to be expended are included.

Unfilled orders include orders as defined above that have not been reflected as shipments. Generally, unfilled orders at the end of the reporting period are equal to unfilled orders at the beginning of the period plus net new orders received less net shipments.

D. Composition of Industry Categories

The 79 industry categories used in the survey are groupings of four-digit SIC industries as defined in the 1972 Standard Industrial Classification Manual[6] as amended. The definitions are shown in appendix B.

The coverage for many of these 79 categories is not sufficient to warrant publication of the data. In addition to limitations imposed by the size of the sample, coverage is reduced for some groupings as a consequence of consolidated reporting by some multiunit companies. A company which reports on a consolidated basis (either the entire company or a division) is included only in the M3 category in which the reporting unit as a whole is classified. Therefore, in the monthly estimates, its combined activity influences only the movement of that industry category and has no influence on the movement of the other industries included in the combined report. As a result, it has been necessary to combine these 79 industry categories into 44 publication levels (16 SIC two-digit major groups or combinations of two-digit major groups plus 28 additional categories) for shipments and total inventories. In presenting orders and inventories by stage of fabrication, it has been necessary to introduce further combinations because of the lower response rates for those items.

1. Market Categories. In addition to presenting data for industry categories within the two- and three-digit SIC groups, the M3 also presents the basic data in terms of markets. These groupings are designed to (a) separate shipments of final products from shipments of semifabricated products and materials for further manufacture or by use by the construction industry, and (b) to distinguish finished goods productions as to durability and between consumer-type products and equipment items. Such economic time series provide useful measures of isolating the impact of changes in demand in various sectors of the economy and greatly facilitate analysis of cyclical and growth developments.[7] The market grouping categories provide a further division of final products between consumer goods and equipment for business and government use.

Within the consumer goods category, subtotals are provided for home goods and apparel, and for consumer staples. Materials, including supplies and intermediate products, are subdivided into construction materials and all other. For reasons to be discussed later in this section, automotive equipment is treated as a separate market grouping. The industry composition of the market groupings is shown in appendix B.

In determining the four-digit industry composition of the basic M3 industry categories, the desirability of aggregating data into the two-digit and three-digit SIC groups and into market categories was an important consideration. The extent to which separate tabulation categories could be formed had to be reconciled with the limits imposed by the sample and the reporting capabilities of multi-industry companies. Generally, industries within the same three-digit group were treated as a unit unless there were strong indications that a separate category could be set up for a single four-digit industry or combination of industries within the three-digit group.

The market grouping series is very valuable in the presentation of the monthly industry survey data. However, there are certain qualifications which should be taken into consideration when using the figures. Foremost is the fact that the SIC system, which is basic to the monthly survey, is an industry rather than a product classification system. For this reason, the classification system yields only approximate groupings for marketing purposes. Frequently the industry structure does not distinguish between finished goods which are sold to the consumer and the business markets, and intermediate products which are to be incorporated in final products by other industries.

With one exception, the market grouping categories permit direct comparisons to be made with Federal Reserve Board market groupings in use prior to 1971. The major difference in the two series is the treatment of motor vehicles and parts which is shown as a separate category in the monthly industry survey. In the Federal Reserve Board Index of Production, this category is spread among three groups. The Federal Reserve Board classifies all passenger automobiles and motor vehicle replacement parts in consumer goods, along with automobile trailers, boat building, motorcycles and bicycles. Trucks and buses are classified in equipment and motor vehicle parts for original equipment and materials. The monthly industry survey reports do not separate the value of cars and trucks and it would be most difficult to parallel the Federal Reserve Board categories in this respect. The Federal Reserve Board revised its series in 1971.

2. Supplementary Series. In addition to the market categories, there are two supplementary series: household durable goods industries and capital goods industries.[8] The capital goods industries category is further subdivided into two components: defense and nondefense.[9] These categories are useful in bringing together industries that are subject to the influence of distinct economic forces and exhibit unique patterns in shipments,

[6] The SIC, as developed in the Office of Management and Budget by the Technical Committee on Industrial Classification, classifies establishments to the four-digit industry level by principal type of activity therein engaged.

[7] The advantages of using market groupings in economic analysis have been described at greater length in the Federal Reserve Board publication, Industrial Production, 1971 Revision.

[8] Household durable goods industries — Household furniture; kitchen articles and pottery; cutlery, handtools and hardware; household appliances; opthalmic goods, watches, clocks, and watch cases; and miscellaneous personal goods.

[9] Capital goods industries: Nondefense products — Machinery, except electrical (excluding farm machinery and equipment and machine shops); electrical machinery (excluding household appliances, radio and TV, and electronic components); railroad equipment; and the nondefense portions of shipbuilding and military tank vehicles, communication equipment, aircraft, aircraft parts, and ordnance. Defense — Shipbuilding and military tank vehicles, communication equipment, aircraft, aircraft parts, and ordnance.

inventories, and orders. Seasonal factors are presently developed directly from the historical data of the separate defense and nondefense portion of the ordnance, communication equipment, complete aircraft, aircraft parts, and shipbuilding industries. The separation of each industry into defense and nondefense components from January 1968 forward in no way compromises the historical comparability of the total industry without seasonal adjustment. However, the data user should be cautioned that the comparability of the seasonally adjusted series demonstrates a potential break, particularly in the year 1968, due to the separate seasonal adjustment of defense and nondefense components of each industry.

VI. 1978 INVENTORY VALUATION SURVEY

A. Background

Data on the value of year-end inventories, tabulated by the various inventory valuation methods, have been updated with information collected on the 1978 Inventory Valuation Survey. This annual survey supplements the book value end-of-year inventory data published in the monthly Manufacturers' Shipments, Inventories, and Orders Report (M3).

An inventory method-of-valuation survey was first conducted in 1975, covering valuation practices followed by large companies in 1974 and 1973. Results of that first collection effort were inadequate and, consequently, were not published. The survey has subsequently been conducted on an annual basis, and the results of the 1976 through 1978 surveys are shown in table A. The percentages for 1977 are revised from those previously published in the June 1978 report to reflect revisions received from responding companies. Data for 1975 have been omitted from this table due to a lower response rate than in the subsequent surveys.

In the Inventory Valuation Survey, companies were asked to report the percentage of their December inventories, as reported in the M3 Survey, valued by the following accounting methods:

1. First-in, first-out (FIFO)
2. Last-in, first-out (LIFO)
3. Average cost
4. Specific or actual cost
5. Standard cost
6. Other cost methods
7. Market valuation methods always used
8. Market valuation used because market value was lower than cost
9. Other market methods

The last four methods were collected separately, but combined for publication purposes. Where individual methods in this aggregate are significant for particular industry categories, the figures are shown in the footnotes to the table.

B. Methodology

The percentage distribution estimates in table 9 were developed by 1) allocating the responding companies' December total inventory figures to the various valuation methods according to their supplemental survey responses, 2) aggregating these values to the 79 industry categories, and 3) calculating the percentage distribution of the computed aggregates. The value estimates were derived by applying these distribution percentages to the total industry estimates as published for December in the M3 survey.

These estimates may differ from the distribution of valuation methods used for public financial reporting or income tax purposes, since monthly valuations are generally based on internal accounting records. For example, a company may use LIFO for external reporting purposes and FIFO for internal accounting purposes and for reporting in this survey. In such instances, respondents were specifically instructed to report the valuation method used for the figure reported to the Bureau of the Census in the monthly M3 survey. These percentages are also believed to differ from the distribution of accounting methods used for inventories as reported for individual establishments in the Annual Survey of Manufactures (ASM), which provides the benchmark on which these inventory aggregates are based.

- Represents zero. (D) These figures are withheld to avoid disclosing figures for individual companies. N.e.c. Not elsewhere classified. (Z) Less than 0.5 percent.

[1]IMPORTANT NOTE: This table provides information on the distribution of the various inventory valuation methods used by responding companies for their end-of-year inventories reported in this survey. These estimates may differ from the distribution of valuation methods used for public financial reporting or income tax purposes. For a complete description of the survey, please read the accompanying text.

[2]These percentages entirely reflect usage of market valuation methods rather than other cost methods.

REPORT FOR

U.S. DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

FORM M3

CURRENT INDUSTRIAL REPORTS

MANUFACTURERS SHIPMENTS,

INVENTORIES, AND ORDERS

This report is authorized by law (title 13, United States Code). Although you are not required to respond, your cooperation in this voluntary survey is needed to make the results of this survey comprehensive, accurate, and timely. By section 9 of the same law, your report to the Census Bureau is confidential. It may be seen only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

In correspondence pertaining to this establishment's report, please refer to the file number above your name

INSTRUCTIONS – Please refer to the Instruction Manual before filing this form. Complete and return this form in the envelope provided to:

Bureau of the Census
1201 East Tenth Street
Jeffersonville, Indiana 47132

(Please correct any error in name and address including ZIP code)

EMPLOYER IDENTIFICATION (EI) NUMBER
Identification number used on Employer's Quarterly Federal Tax Return (U.S. Treasury Department Form 941) *(Enter if not shown)* →

(Correct number if wrong)

APPENDIX A. **Sample of M3 Report Form**—Continued

PART IA ADDITIONAL ITEMS OF THIS ESTABLISHMENT
Use this part if you do not have enough space in part I. — Page 2

Item (a)		Unit of measure (b)	Item code (c)	Amount for this period in unit of measure shown in column (b) (Enter figure or mark None) (d)		THE FIGURES SHOWN BELOW WERE REPORTED FOR THE PREVIOUS TWO PERIODS	
Product code	Description				None	(a)	(f)

If continuation sheets have been enclosed, complete parts II, III, and IV below only on first sheet.

PART II Has there been any change in the ownership or operation of this establishment during this period?
☐ Yes – Indicate type of change below. ☐ No

	Name of company	Address (Number and street, city, State, ZIP code)	Date of change
A. ☐ Purchased from			
B. ☐ Sold to			

C. ☐ Plant discontinued all operations — Date

D. ☐ Plant operations no longer covered by this survey. (Describe in "Remarks" the products currently produced.)

E. ☐ Reorganized (Describe in "Remarks;" e.g., partnership change or change in corporate status.)

PART III Do the figures shown on this report and on your last report cover the identical establishments?
☐ Yes ☐ No – Indicate reasons for difference in "Remarks."

PART IV Remarks

PART V **CERTIFICATION** – This report is substantially accurate and has been prepared in accordance with instructions.

Signature of authorized official	Title and organization	Date

NOTE: The industry totals compiled from data on this form will be published by the Bureau of the Census in Current Industrial Reports as soon as possible after the necessary reports are received. Copies are available upon request to the Bureau of the Census.

APPENDIX B. Composition of Industry Categories in Terms of 1972 Standard Industrial Classification System

M3 category and comparable 4-digit SIC industries	Market grouping[1]	Code
FOOD AND KINDRED PRODUCTS		
Meat products	2	
Meat packing plants		2211
Sausages and other prepared meats		2221
Poultry dressing plants		2231
Poultry and egg processing		2241
Dairy products	2	2261
Creamery butter		2262
Cheese, natural and processed		2269
Condensed and evaporated milk		2281
Ice cream and frozen desserts		2282
Fluid milk		2283
		2284
Grain mill products	2	2291
Flour and other grain mill products		2292
Cereal breakfast foods		2293
Rice milling		2294
Blended and prepared flour		2295
Wet corn milling		2296
Dog, cat, and other pet food		2297
Prepared feeds, n.e.c.		2298
		2299
Bakery products	2	
Bread, cake, and related prolducts		
Cookies and crackers		
Sugar and confectionery products	2	
Raw cane sugar		
Cane sugar refining		231-
Beet sugar		232-
Confectionery products		233-
Chocolate and cocoa products		234-
Chewing gum		235-
		236-
Fats and oils	6	237-
Cottonseed oil mills		238-
Soybeansoil mills		239-
Vegetable oil mills, n.e.c.		
Animal and marine fats and oils		
Shortening and cooking oils		
Beverages	2	
Malt beverages		
Malt		
Wines, brandy, and brandy spirits		2441
Distilled liquor, except brandy		2449
Bottled and canned soft drinks		
Flavoring extracts and sirups, n.e.c.		
		2451
Canned foods and other foods, n.e.c.	2	2452
Canned specialties		
Canned fruits and vegetables		
Dehydrated fruits, vegetables, soups		2411
Pickles, sauces, and salad dressings		2421
Frozen fruits and vegetables		2426
Frozen specialties		2429
Canned and cured seafoods		2431
Fresh or frozen packaged fish		2434
Roasted coffee		2435
Manufactured ice		2436
Macaroni and spaghetti		2439
Food preparations, n.e.c.		2448
		2491
TOBACCO MANUFACTURES		2492
		2499
Tobacco manufactures	2	
Cigarettes		
Cigars		
Chewing and smoking tobacco		
Tobacco stemming and redrying		
TEXTILE MILL PRODUCTS		
Knitting mills	1	
Women's hosiery, except socks		
Hosiery, n.e.c.		
Knit outerwear mills		
Knit underwear mills		
Circular knit fabric mills		
Warp knit fabric mills		2521
Knitting mills, n.e.c.		2522
		2531
Floor covering mills	1	2541
Woven carpets and rugs		2542
Tufted carpets and rugs		2591
Carpets and rugs, n.e.c.		2599

3613	Switchgear and switchboard apparatus	

See footnotes at end of table.

APPENDIX B. Composition of Industry Categories in Terms of 1972 Standard Industrial Classification System—Continued

Code	M3 category and comparable 4-digit SIC industries	Market grouping[1]
	ELECTRICAL MACHINERY--Continued	
	Electrical industrial apparatus	6
3621	Motors and generators	
3622	Industrial controls	
3623	Welding apparatus, electric	
3624	Carbon and graphite products	
3629	Electrical industrial apparatus, n.e.c.	
	Household appliances	1
3631	Household cooking equipment	
3632	Household refrigerators and freezers	
3633	Household laundry equipment	
3634	Electric housewares and fans	
3635	Household vacuum cleaners	
3636	Sewing machines	
3639	Household appliances, n.e.c.	
	Radio and TV	1
3651	Radio and TV receiving sets	
3652	Phonograph records	
	Communication equipment	3
3661	Telephone and telegraph apparatus	
3662	Radio and TV communication equipment	
	Electronic components	6
3671	Electron tubes, receiving type	
3672	Cathode ray picture tubes	
3673	Electron tubes, transmitting	
3674	Semiconductors and related devices	
3675	Electronic capacitors	
3676	Electronic resistors	
3677	Electronic coils and transformers	
3678	Electronic connectors	
3679	Electronic components, n.e.c.	
	Other electrical machinery	6
3641	Electric lamps	
3643	Current-carrying wiring devices	
3644	Noncurrent-carrying wiring devices	
3645	Residential lighting fixtures	
3646	Commercial lighting fixtures	
3647	Vehicular lighting equipment	
3648	Lighting equipment, n.e.c.	
3691	Storage batteries	
3692	Primary batteries, dry and wet	
3693	X-ray apparatus and tubes	
3694	Engine electrical equipment	
3699	Electrical equipment and supplies, n.e.c.	
	TRANSPORTATION EQUIPMENT	
	Motor vehicle parts	4
3713	Truck and bus bodies	
3714	Motor vehicle parts and accessories	
3715	Truck trailers	
	Motor vehicle assembly operations	4
3711	Motor vehicles and passenger car bodies	
	Complete aircraft	3
3721	Aircraft	
3761	Complete guided missles	
	Aircraft parts	6
3724	Aircraft engines and engine parts	
3728	Aircraft equipment, n.e.c.	
	TRANSPORTATION EQUIPMENT--Continued	
	Aircraft parts--Continued	
3764	Space propulsion units and parts	
3769	Space vehicle equipment, n.e.c.	
	Shipbuilding and military tank vehicles	3
3731	Shipbuilding and repairing	
3795	Tanks and tank components	
	Railroad equipment	3
3743	Railroad equipment	
	Other transportation equipment	4
3732	Boat building and repairing	
3751	Motorcycles, bicycles, and parts	
3792	Travel trailers and campers	
3799	Transportation equipment, n.e.c.	
	INSTRUMENTS AND RELATED PRODUCTS	
	Scientific and engineering	3
3811	Engineering and scientific instruments	
3822	Enviromental controls	
3823	Process control instruments	
3824	Fluid meters and counting devices	
3825	Instruments to measure electricity	
3829	Measuring and controlling devices, n.e.c.	
3832	Optical instruments and lenses	
3841	Surgical and medical instruments	
3842	Surgical appliances and supplies	
3843	Dental equipment and supplies	
	Ophthalmic goods, watches and clocks	1
3851	Ophthalmic goods	
3873	Watches, clocks, and watchcases	
	Photographic goods	6
3861	Photographic equipment and supplies	
	OTHER DURABLE GOODS	
	Miscellaneous personal goods	1
3911	Jewelry, precious metal	
3914	Silverware and plated ware	
3915	Jewelers' materials and lapidary work	
3931	Musical instruments	
3942	Dolls	
3944	Games, toys, and children's vehicles	
3949	Sporting and athletic goods, n.e.c.	
3961	Costume jewelry	
3962	Artificial flowers	
3963	Buttons	
3964	Needles, pins, and fasteners	
3991	Brooms and brushes	
3996	Hard surface floor covering	
	Other durable goods	6
3951	Pens and mechanical pencils	
3952	Lead pencils and art goods	
3953	Marking devices	
3955	Carbon paper and inked ribbons	
3993	Signs and advertising displays	
3995	Burial caskets	
3999	Manufacturing industries, n.e.c.	

[1]Market classification codes are:
1--Home goods and apparel
2--Consumer staples
3--Equipment and defense products, except automotive
4--Automotive equipment
5--Construction materials, supplies, and intermediate products
6--Other materials and supplies and intermediate products

APPENDIX C. Monthly Calendar Adjustment Factors for 5, 1/2, 1/2 Trading-Day Adjustment and Other Selected Trading-Day Adjustments, Monthly: 1967 to 1979

(In general, the set of trading-day factors that yields the smallest residual irregular component ($\bar{I}$) after seasonal adjustment are considered preferable. Statistical tests as part of the 1962 benchmarking operation showed that for most industry shipments series, the use of the 5, 1/2, 1/2 set of daily weights yields smaller irregular component factors than other alternatives. For a few series where the 5, 1/2, 1/2 adjustment was not appropriate, weights were selected using evidence contained in the specific data series. These series are listed separately below. In addition to trading-day weights, factors are adjusted to represent 1/12 of a year)

Year	January	February	March	April	May	June	July	August	September	October	November	December

Saparata aeasonal factora for tha induatriaa tabulatad in dafanaa and nondafansa componanta (ordnanca, communication equipment, aircraft, aircraft parta, and ahipbuilding) and motor vahicla and parta ara not abown in tbia tabla. Thaaa induatriaa are indapendantly adjuatad, but publiabed in aggragata only.

APPENDIX E. Average Percentage Changes and Related Measures for Series Components

Definition of Summary Measures— The following are brief definitions of the measures shown in this appendix. More complete explanations appear in Electronic Computers and Business Indicators, by Julius Shiskin, issued as Occasional Paper 57 by the National Bureau of Economic Research, 1957 (reprinted from the Journal of Business, October 1957).

"O" is the average month-to-month percentage change, without regard to sign, in the original series. "CI" is the same for the seasonally adjusted series. "I" is the same for the irregular component, which is obtained by dividing the cyclical component into the seasonally adjusted series. "C" is the same for the cyclical component which is a smooth, flexible moving average of the seasonally adjusted series.

"LHC" denotes the length of the Henderson Trend-cycle. If the irregular movements are small relative to the cyclical movements, then a short moving average will be selected (9 or 13 term). If the irregular movements are large relative to the cyclical movements, then a longer moving average will be selected, (23 term).

"I/C" is the average relative month-to-month change, without regard to sign, of the irregular component divided by the average relative month-to-month change, without regard to sign, of the cyclical component. It serves as an indication of the series' relative irregularity.

"MCD" represents months for cyclical dominance. The average without regard to sign percentage changes in the irregular component and cyclical component are computed for 1 month spans (January to February, February to March, etc.,) 2 month spans (January to March, February to April, etc.,) up to 5 month spans. MCD is the shortest span for which the average change (without regard to sign) in the cyclical component is larger than the average change (without regard to sign) in the irregular component. Since changes are not computed for spans greater than 5 months, all series with an MCD greater than 5 are shown as 6. MCD is small for smooth series and large for erratic series.

"Average duration of run" is a measure of smoothness, and is equal to the average number of consecutive monthly changes in the same direction in any series of observations. When there is no change between 2 months, it is assumed that "no change" is a change in the same direction as the preceding change. The average duration of run is shown for the seasonally adjusted series CI, irregular component I, cyclical component C, and the MCD moving average. The MCD moving average is a moving average with the number of terms equal to MCD of the seasonally adjusted series.

"F-test"— The standard methodology for testing whether a series demonstrates stable seasonal fluctuation is the "F-test." In essence this test compares "between months" variance of the seasonal-irregular ratios (the original series divided by the trend-cycle fluctuation) against all other variance (residual variance) of the seasonal-irregular ratios. F is equal to the "between months" variance divided by the "residual" variance. If the computer F is greater than 2.41 (the 1 percent value for a 10-year series from a tabbed F-distribution), stable seasonality is present. This test demonstrates some shortcomings in identifying the presence of seasonality in only one month, or in identifying seasonality in a series that undergoes moving or changing seasonal patterns. These summary measures include a statement as to whether or not the "F-test" has been passed. In either event, the derived seasonal factors have been used to adjust the component series.

PART I.—SHIPMENTS

Category	Average percentage changes				Length of Henderson trend-cycle	Ratio of irregular component to cyclical component	Number of months for cyclical dominance	"F test" for stable seasonality	Average duration of run			
	Original series ($\bar{O}$)	Seasonally adjusted series ($\bar{CI}$)	Irregular component (I)	Cyclical component ($\bar{C}$)	(LHC)	($\bar{I}/\bar{C}$)	(MCD)		CI	I	C	MCD
